TeamWorx Electrical

TeamWorx offers two daisy-chaining power systems.

- V2 System - a 4 wire, 2 circuit system that provides a cost effective solution with power bases with data knockouts.
- S1 System - an 8 wire, 4 circuit system offers higher capacity, load and ground capabilities.

In a daisy-chaining system, power only needs to be provided to the first station in a cluster. Then that station "passes-on" the power to the next station, which then passes it on to the next station, and so-on. Daisy-chaining systems are also considered safer and may be required in certain installations due to safety regulations. All components are UL-Listed and made in the USA.
